The escalation of events changes the command and control communications from day-to-day to an emergency structure, which is well documented in the FAA 1900.1 and Civil Aviation Security SOPs. How well did it work? It is not perfect and there will be lessons learned. It is impossible to know what changes can be made until the process can be evaluated. First, the ROC must finish the job supporting command and control over the NAS until it is back to normal.

Time: CDT	Event:	Action and Process of Notification
0745 9/11/01	RDO was monitoring the news and witnessed first aircraft hit WTC. This was witnessed by most of the FAA as well as the public at large. This sparked simultaneous actions and within minutes most lines of business established their LOB nets and coordinated information with the ROC as well as other LOBs in using many processes, techniques and means.	AGL-530 specialist witness in ROC Page was sent to AGL-1/3/5/500/505 0753c
0750	<p>Washington Ops Center set up National Net. LOBs sent their CWG representative to the ROC. Once the national net is established the chairperson (in this case CAS) becomes the spokes person for the FAA. All requests from SS, FBI, White House, DOD are made on this net. All information needed by FAA is done up the chain of LOB command and given to the spokes person.</p> <p>Assignments to AGL came down through LOB chain of command.</p> <p>Once the Emergency Operations plan is activated. Day-to-day notification SOPs are suspended and emergency coordination takes place.</p> <p>Phone, FAX, alpha pagers, e-mail nets and personal representatives are in constant coordination between LOBs and the ROC as requests are made or new information is reported.</p>	<p>WOC requested AGL-ROC be on the net because of proximity to AEA.</p> <p>From this point on the Ops Officer handles several phone calls a minute from Press, public, Law enforcement, aviation industry as well as facilities. He made hundreds of calls to field facilities, LOB representatives, other Ops Centers. He also had to respond to building evacuation, Transmitting RENOTs, supplying SAT and cell phones, GETS Cards, make announcements and</p> <p>CAS specialist remained in ROC, coordinated with secondary net set up in CAS office. Law enforcement calls were transferred to him.</p> <p>AT, AF, and Public affairs. Worked very much the same way.</p> <p>Ops Officer makes and receives calls to ensure coordination or de-conflict information.</p> <p>Calls from the field and other information was raised simultaneously and in parallel.</p>
9/14/01 1600	National Net still active and the ROC, LOB crisis centers are still manned 24 hours	The National Net becomes the sources of official information. The ROC documents events and verified information. Where operational calls are normally documented, during crisis, notification is shared and coordinated. There is no way normally detailed documentation can be done while responding to the crisis
